### **Corporate Communications and Employee Training**

VSAT can deliver enterprise-wide communications, including streaming video broadcasting, video-conferencing, in addition to allowing remote locations access to the corporate intranet, and the transmission of key sales, employee and inventory data to central processing centers for timely data acquisition and processing.

Interactive learning is another capability. This application allows all your valued employees to participate in corporate real-time, interactive training with live instructors on either TVs or computers. This content can also be broadcast to your locations, stored on computer hard drives enabling independent learning opportunities as well.

### **Music and/or Video**

VSAT broadcasting solutions allow for the broadcast of digital music and video to remote sites. The broadcast content can either be sent as a live-stream or downloaded to be retrieved later.

### **Software Update Distribution**

VSAT satellite networks allow for the broadcast of mission-critical software updates, applications, pricing and other information to remote sites simultaneously.

### **Enabling Enhanced Technology and Emerging Applications.**

VSATs scalability and flexibility enables it to support the implementation of enhanced technology and emerging application within the org
