

Disaster Recovery and Contingency Planning.

In today's world, there is increasing emphasis on IT/Telecommunications disaster recovery. Proper contingency planning and the acquisition of the proper assets and services to implement the plan can help in preparing and recovering from both man-made and natural disasters. It is essential that proper planning and testing is conducted to help insure that valuable and critical telecommunication and IT services are not lost during disasters.

There is a wide variety of solutions and commitment levels with regards to disaster recovery, depending on a wide variety of factors determined by the customer's unique business model and telecommunication and IT requirements.

- Business Continuity
- Critical Site Redundancy
- Data Backup
- Emergency Restoration
- Enterprise Solutions
- Fail-Over Service(s)
- Fixed-Site
- Full IP Functionality and Services
- Hosted Solutions
- Mobile (Transportable Command Center)
- Virtual PBX
