VSAT Warehouse Inventory Control

VSAT is an efficient and cost effective method of inventory control, whether regionally, nationwide or worldwide.

- Electronic Data Interchange
- Instantly Adjust Inventory across Distribution and Warehouse Network
- Institute and Integrate Corporate Intranet
- Integrate RFID systems with Satellite Systems
- Minimize Inventory and Warehousing Costs
- Real-Time Inventory Control
- Scalability (Dynamic)

There is no need for a complex network to provide "real-time" inventory control and management functions. VSAT provides the ability to extend the company's wan and have all your centers connect on your existing corporate network. Your sites act as nodes, you decide the required information and bandwidth, with VSAT's voice and fax capabilities your VSAT terminal can act as an extension on your company's switchboard as well. Global connectivity, local compatibility.

The VSAT Inventory network can interface with Point-Of-Sale (POS) systems to automate ordering, shipping and increase the efficiency of your overall logistics program. VSAT ability to quickly deploy to multiple destination points providing high-speed connections makes it an ideal choice for companies dealing with diverse locations and its dynamic scalability and custom implementation for the end-users specific and unique requirements makes it an ideal choice for implementing a comprehensive warehousing, inventory and logistics program.
